DETAILED ACTION

Claims 1-34 are pending in this action.

Election/Restrictions

Applicant is required to elect one of the following disclosed patentably distinct species for which claims 1-11, 18, 19, 21, 22, either 23 or 24 (see below) and 25-34 are generic:

- Claims 1, 12-16 and 20 are directed to an embodiment wherein the mathematical optimization uses a linear program.
- Claims 1 and 17 are directed to an embodiment wherein the mathematical optimization uses a non-linear program.

The species are independent or distinct because each embodiment is mutually exclusive, i.e. the mathematical optimization program must be either linear or non-linear, which are different computing techniques not common to each other, has acquired a separate status in the art and requires separate consideration and searches.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Furthermore, applicant is required to elect among the following disclosed patentably distinct species for which claims 1-11, 18, 19, 21, 22, 25-34 and either 12-16 and 20 or 17 (upon election of one as noted above) are generic:

- Claims 1 and 23 are directed to an embodiment wherein a greedy algorithm uses the identified portion of aggregation individuals to make a determination.
- Claims 1 and 24 are directed to an embodiment wherein a random assignment algorithm uses the identified portion of aggregation individuals to make a determination.

The species are independent or distinct because each embodiment is mutually exclusive, i.e. the determination can be made by either a greedy algorithm or a random assignment algorithm, which are different statistical techniques not common to each other, has acquired a separate status in the art, and requires separate consideration and searches.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. §103(a) of the other invention.
